

Layer is a WMS feel from: <http://radar.srh.noaa.gov/>

This operational server maintains a current database of meteorological and hydrological data, historical data, and written information generated by the NWS or received from other official sources. In addition, this server accesses in realtime a selection of current official weather observations, forecasts, and warnings from U.S. government sources for use by the national and international community. In an effort to enhance the science, experimental products may be accessible on this server and care must be taken when using such products as they are intended for research use.

This server is available 24 hours a day, seven days a week . Timely delivery of data and products from this server through the Internet is not guaranteed. Official NWS dissemination systems which can provide timely delivery of data and products are listed below.

- \* NOAA Weather Radio,
- \* NOAA Weather Wire,
- \* EMWIN®,
- \* Family of Services (FOS),
- \* NOAAPORT,
- \* and your local National Weather Service.
